2. The technical experiments for radar manufacturing are in the hands of the UIW. The experimental institute itself, the Távközlési Kísérleti Intézet (Long Distance Relays Experimental Institute) (TAKKI) has only recently been built on the Rózsadomb in Budapest, at Gábor Aron and Törökvesz Streets.
3. The TAKKI has thus far produced ten radars, all mounted on trucks which cost about one million forints each. The Hungarian radars, however, have turned out to be "terrible flops"; none of them is performing satisfactorily, "there is always something wrong with them". The model is an obsolete one and is being referred to as the "Hamburg" design. Whether the "Hamburg" name refers to a German built radar which the Germans built at Hamburg during the war or whether this means the design of a British built radar which might have been captured by the Germans during the war at Hamburg is unknown.
